ACO gravity filling machines

The ACO Gravity Filling Machines are designed for filling any free flowing product into glass or plastic containers – from 150ml to 5 litres. The frame is made in stainless steel together with stainless steel worktop and product tank.

The 14mm diameter nozzles are easy to dismantle and clean. The empty containers are placed directly on to the filling nozzle and lowered back down on to the bottle bar. They are then filled automatically and to a preset level then can be placed onto a table top ready for capping. This easy operation ensures quick and constant production.

Bottle size change is an easy operation – raising or lowering of the bottle loading platform by hand.

Material:	All contact parts and frame manufactured in stainless steel 304
Product tank Capacity:	35 litres
Dimensions:	600 x 500 x 1600mm high x 40kg
Cleaning:	Filling heads easy to dismantle and clean
Level Controls:	Electronic float level control supplied as standard
Product feed:	Integral infeed pump included
Services:	230v 50hz – for pump and level control
